

Acronis® Antivirus 2010

Proactive virus and malware protection

Shield up to three home PCs from viruses and other malware in an easy-to-use package

Your PC is under constant assault from new viruses appearing at a rate estimated as high as nearly 10,000 a week, and it's also under constant threat from spyware, phishing attacks and more. Protect yourself from these onslaughts with Acronis® Antivirus 2010, one of a family of Acronis products designed to protect the data inside Windows and Linux PCs while simultaneously shielding them from external threats. Acronis Antivirus is a one-year subscription-based solution.

Safely open files from people you know... and from people you don't

Real-time Web and anti-spam e-mail scans keep you safe while you work. You'll keep your online activities out of the reach of spyware programs, and ensure that rootkit programs - those nasty, hidden executables that can gain control of your PC - are kept at bay.

Guard against identity theft

With Acronis standing between you and identity thieves, you can confidently take care of online banking, shopping and Web browsing. Acronis Antivirus 2010 also blocks malware from accessing personal information found in your emails or created either during Web activity or while instant messaging. Moreover, it identifies and blocks Web pages that attempt to steal credit card data.

Encrypt your instant messages automatically, play games without interruption

Acronis encrypts your instant messaging traffic to keep conversations private on Yahoo!® and MSN Messenger®. If you are a gamer, you can set Acronis Antivirus 2010 to automatically avoid making a request that would interrupt your game play and slow CPU performance.

Scans faster to lower system overhead

High-speed scans, two detection technologies and a continuously updated threat database find and counter problems fast. Acronis identifies known safe files that don't need to be scanned and moves on to those that do. This translates into faster scan speeds and reduced CPU processing requirements. For mobile computers, this also means more efficient battery use. Laptop users can prolong battery life further by taking advantage of an energy-saving Laptop Mode.

Multiple levels of interaction

Choose your interface to the software based on how much interaction you'd like to have with it. Control the settings for up to three PCs from one location. Whether you're a novice or an expert, your PC is safe.

Features and Benefits

- Protect from external virus and malware threats.
- Do your banking, shopping and Web surfing in private.
- IM encryption keeps your conversations away from prying eyes.
- Extra features for gamers, networks.
- Efficient by design.
- Works with Acronis® True Image 2010, the award-winning way to back up and protect your Windows or Linux PC.
