

Acronis[®] Backup & Recovery[®] 10 Server for Windows

Acronis[®] Backup & Recovery[®] 10 Server for Windows simplifies and automates backup and disaster recovery processes of Windows servers across physical and virtual environments, improving RTOs and increasing IT productivity. Based on patented disk imaging and bare metal restore technologies, it provides smaller organisations a simple, cost-effective solution to locally manage backup and restore activities on stand-alone Windows Servers.

Fast restore of OS and data to meet Recovery Time Objectives

The contents of an entire hard drive, including the operating system, applications and data, can be fully recovered in minutes, instead of hours or days. Or recover instantly with the new Acronis Instant Recovery feature. An Acronis Universal Restore option quickly restores backup images to dissimilar hardware, eliminating the need for identical standby hardware in the event of a failure.

Intuitive user interface for ease of use by IT and novices

Acronis Backup & Recovery 10 provides an intuitive graphical user interface to speed installation, configuration and deployment. It simplifies carrying out backups and recoveries, saving time and resources. In addition, a dashboard interface enhances administrators' abilities to monitor configured and running operations on the system.

Comprehensive, customisable Reporting

Advanced reporting capabilities simplify the process of tracking the health of your Windows server. Choose the reports you need to see and customise them as needed.

Enhanced support for Virtual environments

Acronis supports VMware, Microsoft Hyper-V, Citrix XenServer and Parallels environments. It is integrated with VMware[®] vCenter[™] and VMware vSphere[™] and is now certified Citrix Ready.

Advanced backup scheduling with policy-based management

Backup plans can be developed according to the company's policy and the importance of the servers. The scheduled tasks will be launched systematically in the background without disruption of service, keeping the critical data safely protected. In addition, backup can be triggered based on preset events and conditions such as the addition of a certain volume of data to the system.

High level backup protection for mission-critical servers

Enhanced archive validation, data encryption as well as dual destination backup provides a high level of protection and security for the mission-critical server backups. Acronis Backup & Recovery 10 supports a wide array of storage devices and location including local attached disk, Network Attached Storage (NAS), Storage Area Network (SAN), FTP server, optical devices and tapes, as well as the unique Acronis[®] Secure Zone[®] partition.

Main Features

Fast and easy recovery

OS, applications and all data can be fully recovered in minutes, instead of hours or days, or instantly with the new Acronis Instant Restore feature.

Recover entire system, single file or folder

Acronis image-based recoveries give you the granularity you need for any kind of recovery.

Graphical User Interface

Intuitive interface makes it easy to install, configure, and use for both IT and novices.

Enhanced support for virtual environments

Comprehensive backup and recovery of VMware[®], Microsoft Hyper-V[®], Citrix XenServer[®] and Parallels[®] virtual machines.

Policy-based management

Develop policies to automate backup plans.

Monitoring

The dashboard provides an overview of the configured and running operations on a system.

Advanced scheduling capabilities

Backups triggered by events such as log on, log off or the addition of a large volume of data to the system.

Advanced reporting

Advanced reporting gives you complete information needed to protect your Windows servers with preconfigured, customisable reports.

High level Security

User authentication and data encryption secure data access and transmissions.

Features

Backup Options

- Block level image backup
- File level backup
- Full backup
- Incremental backup
- Differential backup
- Microsoft Volume Shadow Copy Service (VSS) support
- Dual destination backup

Backup Targets

- Local attached disk, Network Attached Storage (NAS) and Storage Area Network (SAN)
- Acronis® Secure Zone® partition for local restore capability
- FTP server
- Optical devices
- Tape

Recovery Options

- Bare-metal restore
- Acronis® Universal Restore™ option to recover to dissimilar hardware
- Recovery to different host or destination
- Single file restore
- Acronis Instant Restore
- Acronis® Active Restore™ for priority application restore

Manageability

- Local management console
- Event-based backup scheduling including log on, log off or time elapsed from previous backup and availability of backup destination
- Policy-based operations
- Graphical dashboard for operation status
- Preconfigured, customisable reports

Virtual Machine Support

- VMware, Parallels, Microsoft Hyper-V and Citrix XenServer virtual machine (VM) support
- Back up and recover files, volumes, virtual disks and even entire virtual machines. Integration with VMware® vCenter™ and VMware vSphere™.

Security

- Encrypted backup images
- Encrypted network communications
- Single sign-on
- Backup agent authentication
- Easy to implement in firewall protected environments

Supported Operating Systems

Acronis® Backup & Recovery® 10 for Windows Server

- Windows 2000 Server SP 4+
- Windows 2003 Server SP 2+ (x32 and x64 Editions)
- Windows 2008 Server all SP (x32 and x64 Editions)
