

Acronis® Backup and Security 2010

Protect up to three home PCs,
inside and out

How much are your documents, financial information, music and digital pictures worth? What if they were suddenly gone forever? Hundreds of thousands of Internet viruses threaten to infect and ruin computers each year. Files are deleted or corrupted. Laptops and PCs crash or are stolen. Catastrophes like home fires and floods can wipe out all of your digital assets in just minutes. That's why you need Acronis® Backup and Security 2010 software and online services. Whether you have simply deleted a file by mistake and need to get it back, or you've just experienced a full-scale disaster that has claimed your PC, we are here to protect you.

Acronis Backup and Security 2010

Acronis Backup and Security 2010 is a subscription-based full-featured home PC protection solution to protect you from both internal threats which can cause data loss and external threats which can damage your systems and data. It combines three essential elements into one product:

- **Local backup** (back up and recover any or all of your data very quickly using our patented, award-winning, disk-imaging technology)
- **Online backup** (keep important financial files, photos and other documents offsite in a heavily secure facility, readily accessible 24 hours a day from any location)
- **Internet security** (full protection from external viruses, spam and malware).

Local backup: protect and easily recover all of your data fast

With the Acronis True Image Home 2010 component of Acronis Backup and Security 2010, you can rest assured that all your important data – including pictures, music, documents and applications– are well protected and easily recoverable.

Easy, fast backup and recovery

Acronis True Image Home 2010 provides home users with reliable and timeless backup and recovery of their operating system, applications, settings and personal files.

Friendly, Windows®-style user interface

An intuitive, graphical interface helps you readily define to what and how often a PC should be backed up, based on your needs.

Continuous data protection

Acronis Nonstop Backup™ prevents data loss with continuous system and data protection. It works by carrying out incremental backups every five minutes.

Features and Benefits

Backup and Recovery

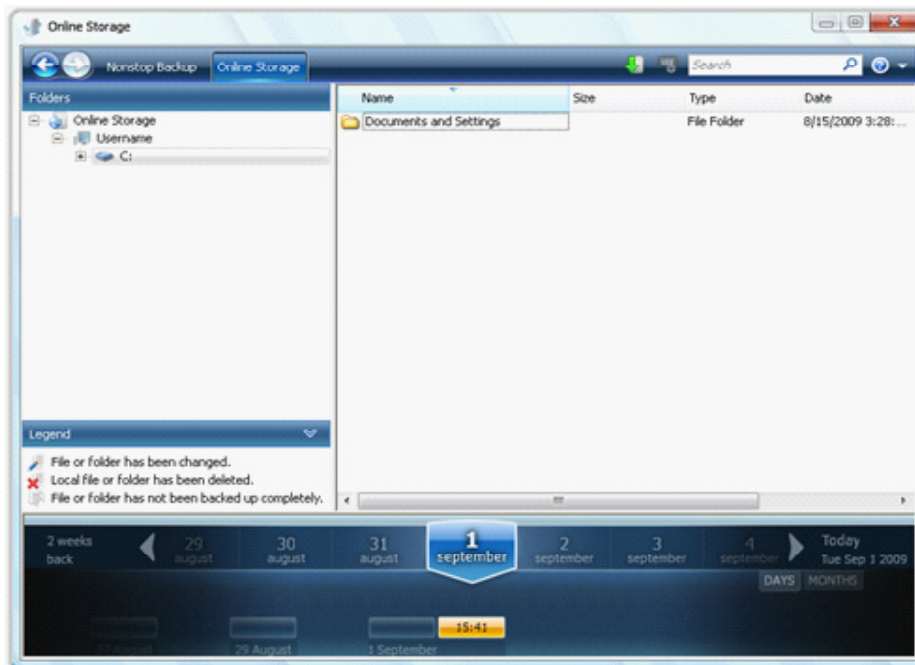

- **Automated backups**
A user-friendly interface, wizard assistance and smart scheduler make it easy to set up comprehensive backups.
- **Fast Recoveries**
Carry out bare-metal restores of an entire disk's content in minutes. Newer data is never overwritten during the restore process.
- **Nonstop backup™**
Automatically create incremental backups of the system, files and folders every five minutes and recover back to any point in time.
- **Acronis® Online Backup**
Automatically back up your most valuable data over the Internet to a secure location.

Internet Security

- Full protection from external viruses, spam and malware
- **Use the Web privately**
Bank, shop and Web surf safely
- **Encrypts Yahoo!® and MSN® Instant Messages**
Keep conversations from prying eyes.
- **Parental controls**
Decide when children can use the Web and what they can access.
- **Extra features for gamers, managing multiple PCs**
Eliminate interruptions during gaming and manage security for up to three PCs from a single management point

Online backup: protect your most critical files at a remote, secure site

Acronis® Online Backup gives you the ultimate in data protection, sharing a common user interface with the local backup function. While local backup provides fast file restores and the ability to recover the entire PC, including the operating system, online backups provide further protection for your most critical files in case of a theft or a home disaster that destroys your local hard disks.

Online backup for additional protection

Acronis Backup and Security 2010 comes standard with 5GB of online backup for your most critical files. It is a one-year subscription.

An upgrade to 250 GB is available.

Retrieve your data, wherever you are

Once your files are backed up online, you no longer have to carry your laptop everywhere. When you need your files, you can download them remotely from any Internet-connected PC. And the process is easy: just a couple clicks and you have access to all of your documents.

Set up in just a few minutes

Simply choose the files and folders to back up, schedule the backup time and that's it. Acronis Online Backup does the rest. Users can "set it and forget it."

Data privacy with government-grade encryption

Your information belongs to you and no one else. Acronis uses industry-leading data encryption for your privacy and protection.

Multi-PC backup

Many families have multiple PCs and laptops in their household. Acronis Online Backup enables you to protect the online data of up to three PCs and laptops in your home on the same account.

Full Internet security

Spyware, phishing attacks, spammers and up to 10,000 new viruses a week pose serious threats to home PCs. Repel them all with Acronis® Internet Security Suite 2010, a key component of Acronis Backup and Security 2010.

Protect your PC from outside threats

Acronis Backup and Security 2010 users can repel all Internet security threats including viruses, phishing, spyware and rootkit programs as well as spam emails.

Retrieve your data, wherever you are

Block access to inappropriate websites and set the timeframes during which your children can access the Internet and games, all from a single PC. Lock sensitive files and personal information away in your personal Acronis data vault.

Use the Web without being victimised

Connect securely to any network at home, at the office, or away, confident that Acronis' superior antivirus, anti-malware and threat detection technologies will protect your PC data. Real-time Web page and e-mail scans keep you safe, while anti-spam protection turns away unwanted solicitations. Spyware programs that could track your activities are firmly blocked, while dangerous, hidden rootkit executables are exposed and eliminated.

Guard against identity theft

Take care of online banking and Web browsing without worry. Block malware from accessing personal information found in your e-mail. Identify and block Web pages that attempt to steal credit card data and other personal information while you're shopping online. And keep conversations private on Yahoo!® and MSN Messenger® with military-grade encryption.

Play games without interruption

If you are a gamer, you can set Acronis Internet Security Suite 2010 to automatically avoid making a request that could interrupt your game play and slow CPU performance.

Scan faster to lower system overhead

Acronis identifies known safe files that don't need to be scanned and moves on to those that do. This translates into faster scan speeds and reduced CPU processing requirements. For mobile computers, this also means reduced battery use. Laptop users can prolong battery life further by taking advantage of an energy-saving Laptop Mode.
