

Dr.WEB®
for Kerio WinRoute

Benefits

Scan of traffic of open and protected communication channels

Custom scan lists and adjustable scan settings

Easy administration

Defend what you create

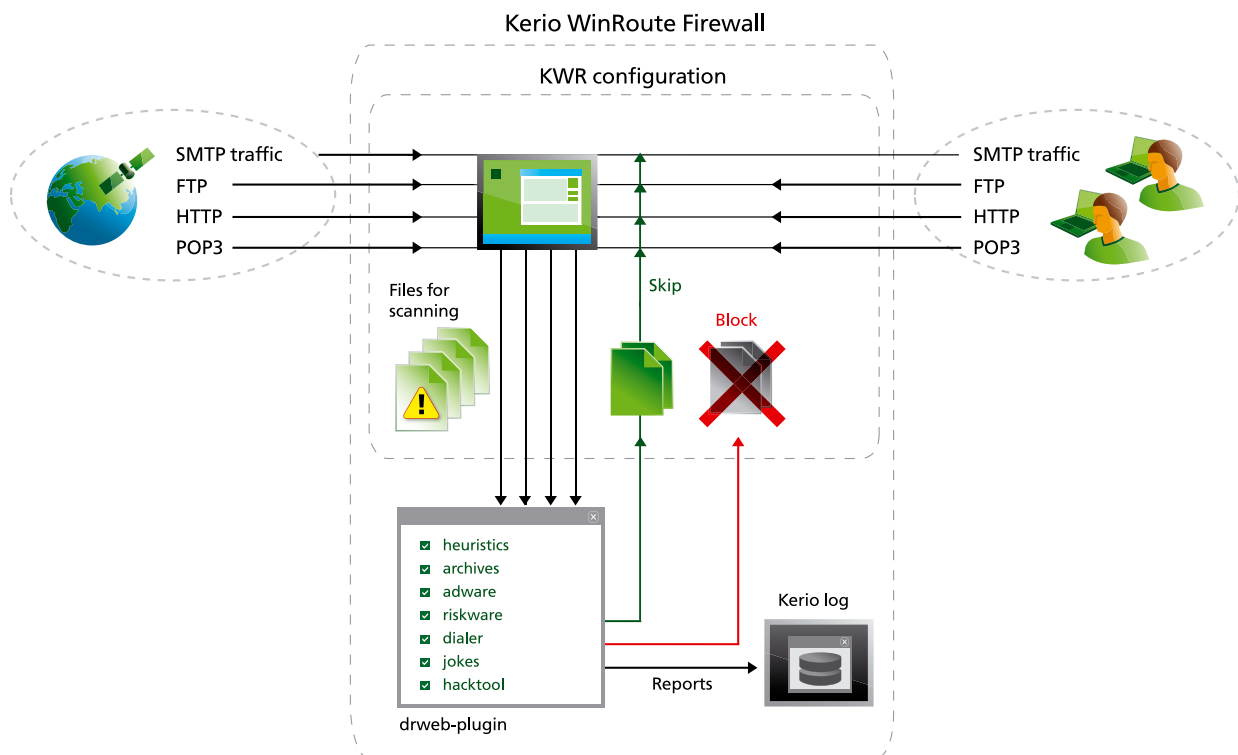

Dr.Web anti-virus for Kerio WinRoute

Dr.Web for Kerio WinRoute communicates with Kerio Winroute Firewall and scans HTTP, FTP, SMTP, POP3 and Kerio Clientless SSL VPN traffic to prevent infection of a system by malware.

Dr.Web for Kerio WinRoute is installed on the same computer as Kerio WinRoute Firewall and interacts with the firewall using the plug-in interface.

Dr.Web for Kerio WinRoute:

- scans HTTP, FTP Kerio Clientless SSL VPN traffic and detects malicious code;
- updates its virus databases.

Easy installation and configuration

The main features of the product are its simple installation and configuration. A system administrator can create lists of protocols for traffic he wants to be scanned as well as adjust scan settings., e.g. set the max size and type of scanned objects and actions performed to infected objects. Fine-tuned anti-virus software helps create a highly productive corporate network environment.

Easy administration

A system administrator doesn't need to monitor operation of Dr.Web for Kerio WinRoute real-time. Instead he receives notifications via e-mail or SMS.

Logging

Dr.Web for Kerio WinRoute utilizes the Event Log and a text log file to store information about errors and other events. The log also contains module settings, virus alerts for every e-mail message and every instance of detected infection. Customizable text log size allows controlling disk space used by the program.

Global updating system

- Dr.Web global monitoring system collects virus samples all over the Internet.
- Updating servers are located in different parts of the globe.
- A hot update is released immediately after a new threat has been analyzed.
- An update is tested over a huge number of clean files before it is released.
- The most compact virus database bringing faster scan speed, lower CPU load and instant updating allows detecting dozens and sometimes thousands of similar viruses using one database entry.
- Updating of virus databases and software modules is completely automatic.

Technical support

While the license is valid, the user can receive technical support from Doctor Web free of charge. The free support services include:

- Unlimited support requests submitted using the web-form at <http://support.drweb.com/>;
- Free updating of the Dr.Web virus databases;
- Free updating of Dr.Web software modules;
- Unlimited downloads of the distribution file
- Free access to the knowledge database (<http://support.drweb.com/faq/>);
- Dr.Web users forum.

System requirements

- Free disk space: at least 30 MB.
- Operating system: Microsoft® Windows 2000/XP/2003/2008.
- Kerio WinRoute Firewall 6 or later.

Licensed components

- Anti-virus filter for Kerio Winroute Firewall 6;
- Automatic updating utility.

Licensing

The product is licensed per number of users in the network protected with Kerio WinRoute Firewall.
