

## How are your employees spending *your* time?

According to recent studies about 90% of employees use Internet resources unrelated to their job while at work. UserGate provides you with an easy-to-use tool to control your staff's activity on your network.

## Connect your LAN to Internet, easy and secure!

With UserGate Proxy Server you can connect all your Local Area Network users to the Internet using only one external IP address.

## Protect your office from attacks and viruses!

UserGate Proxy provides you with antivirus control of your entire network's inbound and outbound traffic.

UserGate has built-in security options including an effective firewall and double-core antivirus protection. UserGate also provides VPN and ICMP protocol support to safeguard privacy and maintain the integrity of any data transmission.

# Connect Protect Manage!

Entensys has released its new version of UserGate Proxy Server, the popular Internet security and connection sharing software.

- Internet Connection Sharing
- Speeding up your Internet connection by caching Internet resources
- Numerous administration options
- Preventing your users coming to inappropriate websites
- Firewall protection for all traffic
- Antivirus engines clean up all HTTP, FTP, POP3 and SMTP traffic.

### Recommended prices:

- UserGate from USD 77
- UserGate with Kaspersky Antivirus from USD 177
- UserGate with Panda Antivirus from USD 179
- UserGate with Dual Antivirus engines from USD 279

## Manage your network

Entensys offers UserGate Proxy Server, the powerful multifunction tool for network administrators that provides:

- Built-in options for information security.
- Management of LAN user activity.
- Built-in billing system.
- Traffic control system.

You can provide faster internet access to the most frequently used internet resources with UserGate's Internet page caching, filter controls and the blocking of employee access to entertainment sites.

## Internet access management

With UserGate, an administrator can flexibly manage Internet access by creating allowed and disallowed domain lists and/or IP addresses.

With its built-in filters, UserGate can block advertising banners and can block access to undesirable resources, such as MSN, ICQ or other instant messengers, as well as specific websites.

Administrators can restrict the loading of files having particular extensions, such as .mov or .mp3.

The Statistics Module analyzes Internet usage by each user.

UserGate can cache all web pages visited, which greatly accelerates Internet access and significantly reduces channel load.

## Administration through Proxy Server

### Network rules

Network Address Translation (NAT) support is an advanced technology for connecting multiple computers to the Internet using one IP. You can create and edit NAT rules, as well as word rules, for port mapping and transparent Proxy settings. NAT switch turns NAT support on or off in UserGate Proxy Server. With UserGate, you can authorize users by:

- Username and password.
- Windows authorization.
- Active Directory authorization.
- IP address.
- IP and MAC address.
- IP and MAC ticket.

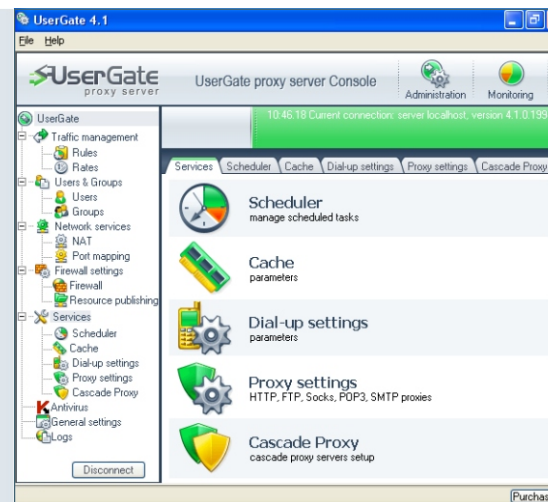

UserGate supports such protocols as HTTP (caching), FTP (caching), Socks4, Socks5, and any UDP/IP protocol for NAT.

User import from **Active Directory**. Now you don't have to set hundreds of users by hand, the program will do it for you!

**Internet content filtering restricting user access to resources not related to work.**

**Real-time Connection Monitoring** allows the viewing of active user IP addresses, usernames, exact volumes of sent and received traffic, and lists of URLs visited.

**Scheduler** provides a convenient running of the following tasks: launching external applications, automatic opening or closing of dial-up connections, e-mailing statistics to users, and other functions.

**Statistics Reporting System** can automatically and manually e-mail users their personal Internet statistics, as well as bill them for specified time periods.

UserGate has a flexible report generator that includes the capability of exporting stats to MS Excel.

**Remote Administration** allows network administrators to work remotely and to be more mobile.

### Software requirements:

UserGate Proxy server with NAT (Network Address Translation) works on Windows 2000/2003/XP with the usual TCP/IP protocols installed. Without the NAT protocol support UserGate can work on Windows95/98 and Windows NT 4.0.

### Hardware requirements:

A dedicated computer or a computer that is seldom used having the following minimum configuration: Pentium II 400MHz, 64 MB RAM, 10 MB of hard disk space plus additional hard disk space for a web page cache and log files.

## Information security for your office

UserGate has built-in protection options, such as its own firewall, Panda Antivirus and Kaspersky Antivirus.

UserGate's firewall prevents unauthorized access to your LAN and server data, and blocks connections via specific ports.

The Panda Antivirus engine is integrated into UserGate Proxy, so Panda Software works as a filter intercepting all data transferred through various Internet protocols. Kaspersky Antivirus (an optional add-on) scans and intercepts any data that has a virus.

**Automatic start-up for dial-up or incoming VPN connections!**

VPN and ICMP protocol support provides privacy and data transmission integrity. It also allows users to check server availability on the Internet. POP3 and SMTP protocol support allows the built-in antivirus module to check e-mail traffic.

  
**Connect. Protect. Manage!**
