FastViewer Confered is on duty at the Cycos AG

Everyone knows this situation:

Suddenly you would like to work nevertheless directly together on a document - that is intuitively possible with solutions from FastViewer.

The cooperation with FastViewer allows each person in our enterprise to plan voice and web conferences with a simple click. The customer works, as he is used to, out of its groupware system. FastViewer's collaboration functions are seamless integrated in our software. Due to the ease of use no further training is necessary .

The participants are invited to the web conference with an email invitation which contains all needed information. They can participate in the conference by simply starting the .exe file. The 256-bit AES encryption provides a high-level security. No application needs to be installed on the users system.

The logo for CYCOS, featuring the word "CYCOS" in a bold, sans-serif font. The "Y" is highlighted in a yellow color, while the other letters are in a grey color.

Owing to FastViewer we could extend our portfolio over this collaboration functions.

Result:

The integration of the FastViewer solution in our cycos mrs permits us to offer our customers a web conference solution, which is very easy to operate, guarantees a high degree of security and is certified by TÜV SÜD.

Our partners and customer are particularly thrilled by the integration into the Groupware, as in this way communication services are offered, where the user needs and also use them daily.

Function overview

Session planner

You want to set up a web conference? Define the sessions subject and its date, time and estimated length. Afterwards you can invite the participants by email. The recipient gets any information he needs and can access your web conference by a click on the invitation link.

List of participants

The list of participants shows all attendees with their name. Here you can assign different rights to each individual participant, which can be changed at any time during the session.

Application selection

With the application selection you define, which programs and contents are transferred to the session participants. Like that it is possible to fade out confidential contents – for example your emails.

Preview monitor

With the preview monitor you have always an eye on what is transferred to the participants. If several monitors are attached to your PC, you can decide whether all monitors will be transferred or only one of it.

Fileboard

The Fileboard allows to share even larger documents, images or other files in an easy way. Every file at the fileboard is accessible for all participants.

Whiteboard

Like on a real whiteboard, meeting participants can express their creative thoughts. They compile together and at the same time a sketch, design a concept or a mind map and each participant save the result on its PC.

Telephone conference

Any number of persons has the possibility to dial up to the conference with their telephone or mobile phone.

Audio transfer via Voice over IP

If this function is activated, all participants are able to communicate completely over their PC. A parallel running telephone conference is not necessary, however possible.

Video

You don't want to miss the gestures and mimics of your meeting partners on a web conference? Just switch on your webcam.

Chat

Most notably at a large number of participants, voice communication is nearly impossible. Questions and remarks are clearly arranged in the chat tray without disturbing the web conference.

Session recording

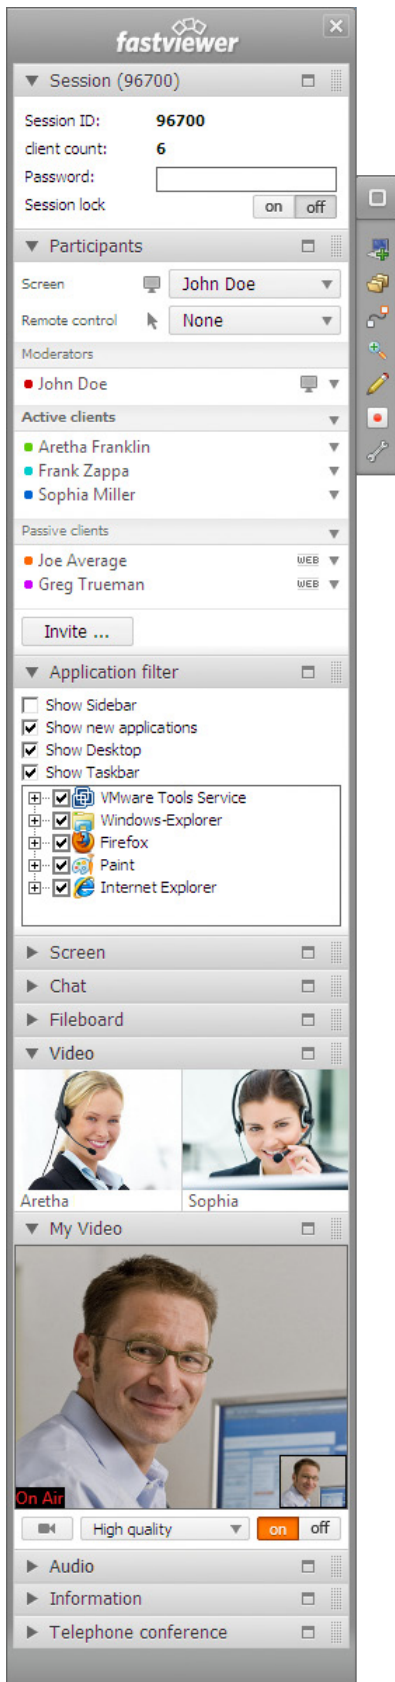

Each participant is able to record sessions forgery-proof. For the playback no additional software is necessary.

Web client

The web client allows you to attend FastViewer sessions with every modern web browser on nearly every operating system – even on your smartphone.

Language adjustment

The modules automatically adjust themselves to the language of your operating system (DE, EN, FR, IT, FR, NL, JP, GR, RU).

No dependence on workplace

Neither the master nor the participant module is bound to a workplace; both can be started from each Windows PC.

No installation - no residue

No configuration or installation is needed. Simply start your FastViewer module and get connected.

Safe encryption method

With the 256-bit AES encryption your data is protected through one of the best encryption methods at all.

Extensive connection log

In order to get an overview of all meetings, an extensive connection log is available. This can be processed by CSV file e.g. in Microsoft Excel.

Adjustment of function and design

With your personal FastViewer customer portal you can simply adjust the modules to your corporate design. Depending upon requirement it is additionally possible to adapt the functions which are on hand during a session.

TÜV certified

TÜV SÜD has kept a close eye on FastViewer Confered exactly. Functionality and data security were successfully examined according to DIN ISO/IEC 25051:2009 (functionality) and PPP 13011:2004 (data security).

Own server solution when desired

A FastViewer server can be integrated smoothly into your infrastructure. Thereby numerous possibilities arise to configure FastViewer properly matching to your needs and ensure your safety standards.

Integration possibility

You can integrate FastViewer into your own application, as if it would be your own software. Therefore an extensive COM interface is available.
