## Specially developed for Mac users:

- Mac-style interface
- Protects against malware from all platforms
- Security while surfing the web and emailing

## Did you know that...?

- Today's digital world is comprised of multiple operating systems, including Windows®, Mac, Linux® and a number of mobile platforms — and your Mac can be used to carry and transfer malware that targets any of these systems. Kaspersky Anti-Virus 2011 for Mac will quickly **neutralize any malware, whatever the platform!**

- Kaspersky Anti-Virus 2011 for Mac uses about 1% of your CPU's processing power in idle mode. It makes efficient use of multi-core CPUs and incorporates the latest intelligent technologies for faster scans, so **it'll never slow you down!**

- In addition to regular automatic updates, you have access to **Kaspersky Security Network** that provides the most recent protection from the newest threats as soon as they appear — thanks to Kaspersky Lab's global network of users. Now you don't need to worry — your protection is always up-to-date!

- **Kaspersky URL Advisor** prevents compromised websites from infecting your computer — by informing you about links to suspicious and dangerous websites. It adds a special indicator close to each link, showing if the link leads to a trusted, suspicious or dangerous website.

- Kaspersky Anti-Virus for Mac has consistently **outsold all other security products for Macintosh** computers in Europe over the past 12 months (According to GFK and NPD researches, June 2010). Buy the most popular protection available for your Mac today!

## We protect your digital life

Award-winning technologies in Kaspersky Anti-Virus 2011 for Mac protect you from a wide range of IT threats:

- Viruses, Trojans, worms and other malware, spyware and adware
- Identity theft by keyloggers
- Phishing websites
- Unauthorized remote control of your Mac
- Zero-day attacks and unknown threats
- Drive-by download infections
- Passing malware on to Windows®, Linux® and Mac computers

...plus more!

Kaspersky Lab reserves the right to change, without notice,

the graphical user interface of the program.

The latest version of the program can be downloaded from: [www.kaspersky.com](http://www.kaspersky.com)

Enjoy the familiar, easy-to-use Mac-style interface and get the best Mac security around, direct from Kaspersky Lab's experts!
