MindManager MapShare™

Improve communication and collaboration across your organization using interactive, information-rich MindManager® maps in MindManager MapShare™.

How it works:

MindManager MapShare is installed on your organization's Microsoft® SharePoint® servers and enables all SharePoint users in the organization to easily open, view and interact with maps through their browsers [no client software required].

Support collaboration enterprise wide

Mindjet MindManager software is used by business professionals to capture, organize, and present the information needed to

- better define projects,
- drive strategic alignment,
- improve decision making.

MindManager MapShare is a MindManager Enterprise Service that supports collaboration among MindManager users and enables sharing of interactive, information-rich MindManager maps across organizations that use Microsoft SharePoint.

Business professionals often have too much information coming from too many sources to be able to connect the dots and make informed decisions.

MindManager brings it all together in a single, interactive view that provides context, coherence and clarity to your data.

Visualizing information and ideas in a map enables teams to think strategically, uncover creative solutions and mitigate risk which results in better decisions.

MindManager MapShare supports active collaboration by enabling easy distribution of detailed project plans, presentations, and meeting notes. All SharePoint users can access and interact with relevant company assets, such as interactive organization charts.

THINK IT. SEE IT. SHARE IT.

MindManager MapShare lets all users in a SharePoint environment:

- Open and review interactive MindManager maps from their browsers without the need for client-side software
- Use standard SharePoint workflows to view, approve and comment on MindManager maps
- Access dynamic content within a single view, including embedded notes and linked web content
- View dynamic MindManager maps embedded within SharePoint sites

MINDMANAGER MAPSHARE FEATURES

Seamless Integration

MindManager users can simply store their maps directly in SharePoint. With MindManager MapShare, SharePoint users across the organization can access and view MindManager maps.

MindManager MapShare Viewer (Integrated Map Viewer)

Anyone in the organization can immediately view MindManager maps files directly within SharePoint via their browser.

Viewer Web Part (Embedded Map Dashboard)

The Viewer Web Part embeds interactive maps into SharePoint sites, ideal for adding a dynamic project dashboard to your site. Arm your teams with the information they need to ensure your projects are on time and within budget.

Check In, Check Out, and Edit

MindManager users can check in, check out, and edit maps directly from Microsoft SharePoint libraries to leverage SharePoint's security and versioning features.

SharePoint Workflows

Take advantage of SharePoint's workflow capabilities to let key stakeholders review, approve and comment on MindManager map files without any additional desktop software required or need to export to other formats.

Languages

MindManager MapShare is currently available in English, German and French.
