

## The all-in-one Toolkit for Administrators

O&O BlueCon can do everything that an Administrator ever needs to do: repair systems, correct errors, delete data, recover data, re-set passwords and manage local users. To name but a few functions. This Kit really does contain every tool an Admin may need on any given day.

### Save time and costs

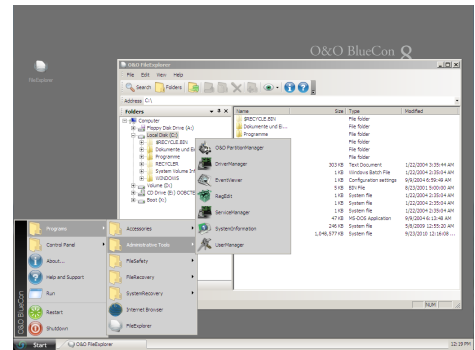

It happens all the time: a PC or a server crashes and the user must interrupt his work. With the help of O&O BlueCon you can repair the affected system quickly and efficiently. You save costs and time, which are both involved when resolving such cases. You can now repair the system without a restoration from an image or running a new installation. In addition, you benefit from the evaluation and analysis capabilities to avoid future similar problems or even resolve them faster.

### Boot from CD

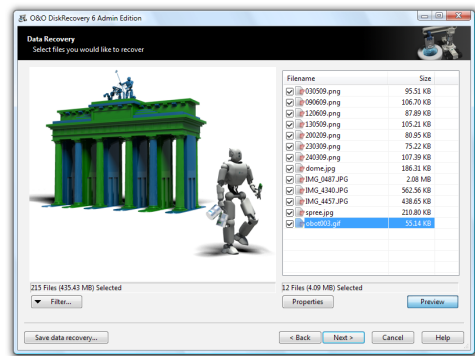

O&O BlueCon and all the integrated programs start direct from CD - no installation is necessary. The Start CD is based on Windows PE (Preinstallation Environment), meaning you can start O&O BlueCon even when your system itself won't start. And thanks to the Windows-like interface, it's eminently easy to use and you need very little time to familiarize yourself with it.

### New in Version 8

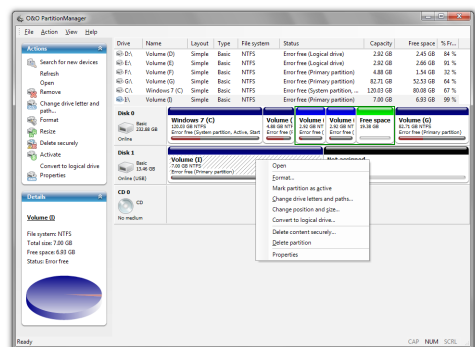

The Start CD from O&O BlueCon with all tools included is now optimized for Windows 7 and Server 2008 R2. In addition to numerous minor enhancements, O&O Partition Manager 3 for easy drive management and O&O DiskRecovery 6 for professional data recovery have been added. O&O Partition Manager enables you to change the system partition in size and arrange files on it to save space. O&O DiskRecovery can reliably track data you thought was lost by using three intelligent search methods. This saves you the hassle of recreating data, if it were even possible.

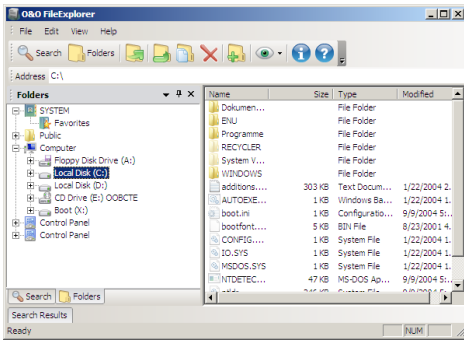

Start O&O BlueCon directly from CD

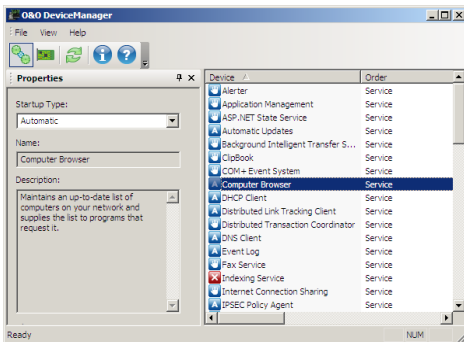

O&O DiskRecovery 6 : Preview for data recovery

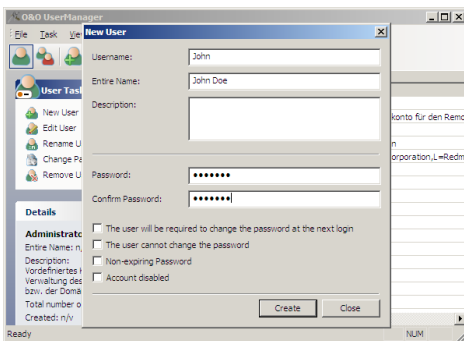

O&O PartitionManager 3: Partitioning made easy

Search for files with O&O File Explorer

O&O Device Manager: Manage drivers and services

O&O User Manager: Manage user data

**Daily problems with Servers and Workstations:**

- Defective driver installation after changing hardware causes blue screen
- Windows fails to start
- Defective Windows updates
- Forgotten passwords
- Systems must be exchanged due to data protection laws
- Loss of data where no backup was made
- Malicious code has damaged the system

**Daily solutions with the tools of O&O BlueCon Admin Edition:**

- O&O DeviceManager for solving driver and service problems
- O&O Event Viewer and O&O Check Disk for detecting errors
- O&O SRP Manager (Windows XP only) and O&O RegEditor to combat Windows errors
- O&O UserManager for resetting passwords
- O&O SafeErase for secure deletion of volumes in accordance with recognized standards
- O&O DiskRecovery for restoring accidentally deleted data
- O&O PartitionManager to partition the hard drive easily
- O&O FileExplorer for locating and removing data
- Built-in Web browser for downloading additional tools

**Application scenarios**

**Problem 1:** Accessing a computer without an administrator password

**Solution:** Start O&O BlueCon direct from CD and open the O&O User-Manager. Here you have access to all registered users and can change the passwords accordingly with just a few mouse clicks. When you have closed BlueCon and restarted the computer, the user can log-on using the new password.

**Problem 2:** Save data from defective systems to external disks

**Solution:** Start O&O BlueCon and connect an external disk e.g. hard disk or USB Stick to the computer. By using the O&O File Explorer you can now navigate through your defective system, just like with Windows Explorer, accessing files and directories. You can then copy the data you require to an external disk. You can also access other computers in the network.

### Problem 3: Completely delete data

**Solution:** The user-friendly O&O SafeErase Wizard helps you delete sensitive data and entire drives so securely that it prevents the data from ever being recovered again, even with specialized software. Thanks to the five different deletion methods, data can be overwritten up to 35 times.

### ROI

Server users these days must work on the basis that the average risk of an outage stands at 0.1 percent. In a 5 x 12 hour operating model, this still amounts to outage costs of over \$58,000.00 (500 employees, at about \$56.00 per hour)! (Tecchannel)

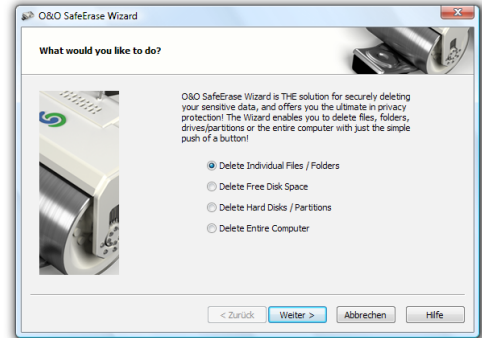

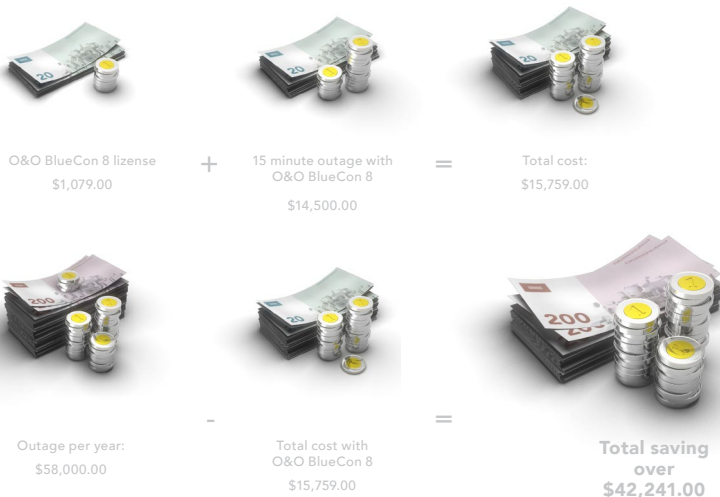

On average, it takes 15 minutes to solve a server problem with O&O BlueCon Admin Edition. These stats provide the following cost figures:

**O&O BlueCon Admin Edition license (one-time outlay): \$1,079.00**

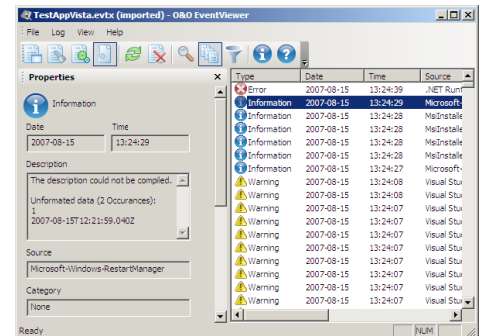

15 minute outage: about \$14,500.00

**Total cost: \$15,759.00 net** (based on a one-time application excluding further scenarios)

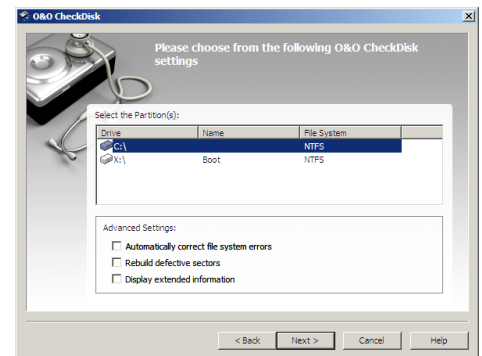

**Total saving: Over \$42,241.00**

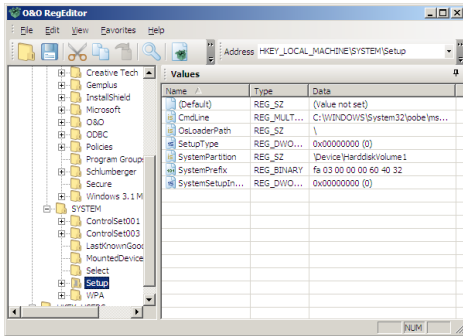

Delete files securely with O&O SafeErase

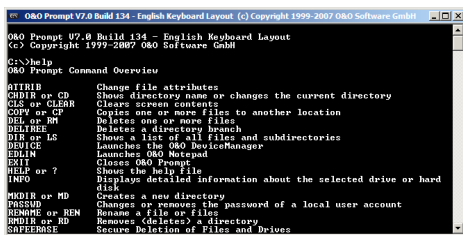

O&O EventViewer: See event logs

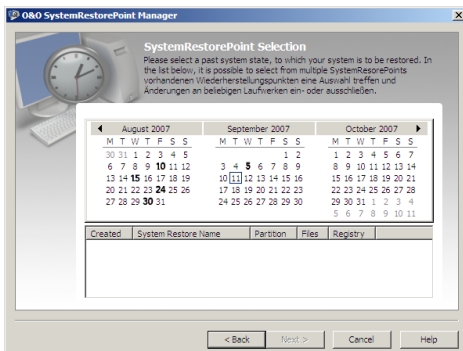

O&O CheckDisk: Check drives for errors

O&O RegEditor: Take charge of the Windows Registry

O&O Prompt: Scripting for entering commands

O&O SRP Manager: Restore system

## O&O BlueCon available for as little as \$29.00 per month

From now on, our O&O EasyLicensing SMB redefines the purchase of software for corporate customers: You can have access to our comprehensive product portfolio for a low monthly fee - fixed at no additional charge starting from \$29.00! Updates to new versions are also included. Our motto: A fast and secure network at an unbeatable price. If you have further questions about licensing, please contact us. We'll be happy to help you!

## Different Editions

O&O BlueCon is available in both an Admin and Tech Edition. These two Editions differ in their functionality and licensing.

The Admin Edition (AE) is licensed per administrator and can be used on all computers in the company.

The Tech Edition (TE) can be used as part of a data recovery service. It is licensed per technician and can be used on an unlimited number of computers. In addition, the TE includes O&O DiskImage 5 for creating images.

## Made in Germany. Made in Berlin.

All O&O products are developed and perfected in Berlin, Germany. We listen to the concerns of our customers, because we know how important their data is for them. And we've been doing that now for over ten years!

## System requirements

- The requirements of the respective operating system
- For Start CD 1 GB RAM recommended
- 32 Bit/64 Bit support
- Windows ® XP and Windows ® Server 2008 R2 (all Editions)
