

O&O RescueBox 14

Professional Edition

First aid for your data

The new O&O RescueBox can resolve almost any crisis involving your computer! It contains the best O&O tools for data recovery, data imaging, and managing your hard disk. The programs work on every Windows operating system, and can also be started directly from the CD when a functioning operating system is not available. The operation is partly assisted, so you won't need to spend time with much training. All components are developed, tested and licensed by us.

Data recovery

O&O DiskRecovery searches for and reconstructs data deleted by accident or due to a software malfunction. O&O DiskRecovery scans every sector of the hard drive, memory card or USB flash drive for lost files. Rescuing data with O&O DiskRecovery can save valuable time by saving you the renewed entry of missing data - if that is possible at all. With the help of two additional integrated search algorithms, known from our multiple award winning O&O UnErase and O&O FormatRecovery, O&O DiskRecovery can now look more thoroughly for your lost data.

Data security

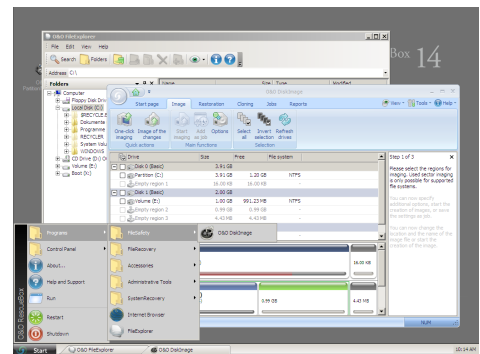

O&O DiskImage can create professional images of your complete system or of individual drives. In the case of an unexpected data loss, this product can turn back time. Simply restore the previously created image onto your computer, and all your data is once again available! The once time consuming installation of the operating system and other applications is now consigned to history. Even a total crash or a computer infected with malicious software, we are able to provide aid with the help of the Start CD. Simply boot O&O DiskImage from CD and restore the last system image - done! From O&O DiskImage 5 on, it is even possible to restore data on a computer with different hardware (Migration Independent Restoration).

Manage your partitions

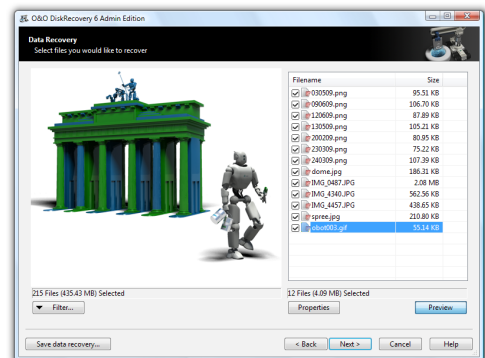

With O&O PartitionManager, you can split your hard disks into partitions, you can move them, and you can change their size. Besides supporting MBR volumes, the program also recognizes GPT volumes as well as external storage volumes, USB sticks and memory cards. If you run the O&O Partition Manager directly from CD, you can even expand or shrink your system partition, which is not possible when Windows is running.

Start CD

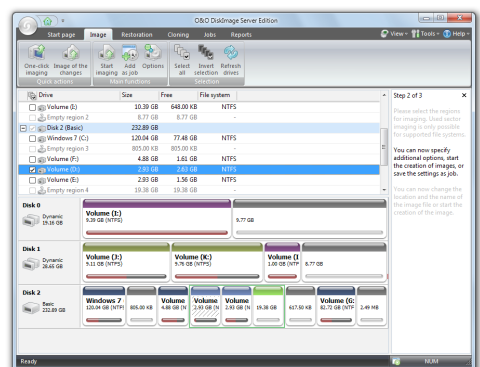

Thanks to the one-of-a-kind Start CD, which is based on Windows PE and carries its own mini operating system, it is now possible to use the programs in the O&O RescueBox without a functioning Windows operating system. For example, you need the Start CD to restore your system partition with O&O DiskImage, to change it with O&O Partition Manager, or to save data from it with O&O DiskRecovery when Windows will

Start O&O RescueBox directly from CD

O&O PartitionManager: Manage your hard disk

Schedule the imaging process (O&O DiskImage)

Search for files with the O&O FileExplorer

not boot anymore. Access to your hardware is guaranteed by the Windows drivers, included within Windows PE. To start the O&O RescueBox directly from a CD, there's no need to install any of the programs. On the Start CD you will have access to various other O&O additional programs, which will help you access the Windows registry or stored files, even if Windows cannot start due to software errors or viral attacks.

Programme at a glance

- O&O DiskRecovery 6 Personal Edition**
 Finds deleted data even if the storage volume shows signs of defective software. Can recover up to 1000 files per session.
- O&O DiskImage 5 Professional Edition**
 Images and restores your data, forensic images for the data rescue to avoid burdening the source volume.
- O&O PartitionManager 3 Professional Edition**
 Easy hard disk management to simplify data rescue and data organization.
- O&O Additional programs**
 For example, O&O FileExplorer, O&O RegEdit and Web browser, executable under Windows PE.

Product features

- Program runs directly from CD without requiring an operating system
- Data recovery made quick, easy and effective
- Imaging of entire systems and individual drives
- Clear and simple disk management
- Supports all internal and external storage media

System requirements

- The requirements of the respective operating system
- For Start CD 1 GB RAM recommended
- 150 MB free hard disk space
- 32 Bit/64 Bit Support
- Windows® 7, Vista®, XP and 2000 Pro (all Editions)
