

Projecting. Simple. Without a white surface.

With the help of smartprojecting™ even for beginners it's simple to receive a projection on the wall within seconds. The professional will be happy about things becoming a lot easier and faster than before. Projection on almost any surface you can imagine delivers unique and boundless possibilities while saving time and money. With smartprojecting™ you can project e.g. directly on a wardrobe in the office, a brick wall on the construction side or the wall paper at home.

Benefits at a glance:

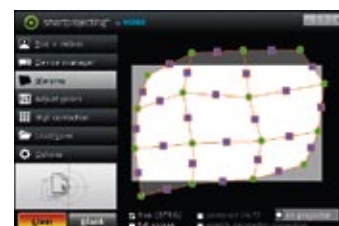

Simple and flexible, because smartprojecting™:

- recognises and activates any connected projector.
- generates a properly aligned image from any position.
- optimises in real-time colour and contrast.
- displays every content using simple drag&drop.
- provides a slide show player for images and videos.
- allows to do all adjustments easily from your PC.
- supports all laptops and PCs with Windows XP/ Windows Vista and a graphics card or graphics chip from NVIDIA, AMD (ATI) or Intel.

Additionally:

- provides accurate projection on extraordinary backgrounds, even patterned wallpaper, brick walls, facades, etc... .
- runs unseen in the background .
- solves many typical problems, like the projection from the backside of a transparent canvas, by offering functionalities like the simple mirroring of an image.

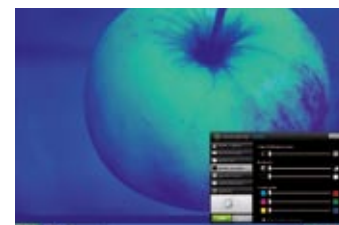

With the help of smartprojecting™ you will be able to give a professional business presentation, to transform a brick wall in your restaurant into an animated sea-world for a special atmosphere, to advertise creative and conspicuously, to have your own cinema at home, or just wow your audience, ...
