

PDFMAILER SERVER

PDF for Every PC in the Network

BUSINESS-PDF for companies

PDFMAILER SERVER equips every PC workstation in a network with the facility to generate PDF files in the standard company look, and to send and store such files. In this manner, it is possible to communicate from any software by means of PDF outputs. Thanks to the flat-rate licensing, PDFMAILER SERVER facilitates uncomplicated license administration.

PDFMAILER: has proven itself to millions of users -

PDFMAILER is the leading PDF software where rational PDF generation for companies is involved. Since 1998, well over a million users have placed their trust in our automatable and easy-to-use product.

and has been rated excellent:

This is what makes PDFMAILER PDFMAILER SERVER stand out

PDFMAILER SERVER is very easy to install and make available to users even in large networks. Thanks to the clear preview and the self-explanatory user guidance, users find it easy to use. The administrator can minimize errors with automation and script codes. The assignment of rights defines the permitted usage framework of each user.

Another plus point

This form of communication (PDF + e-mail) is very cost-effective, since there is no additional cost as is the case, for example, with faxing. An e-mail goes directly to the addressee, since most business persons use e-mail.
