

UEStudio Includes All of the Great Features of UltraEdit, Plus...

Powerful Project/Solution Support

Convert Visual Studio projects, integrate multiple CVS or SVN modules, create new projects using templates, manage multiple projects, and more.

Build Functions

Compile, build, and batch build, debug, integrated debugging for Microsoft C/C++ apps, run your application for testing, and more.

Script Toolbar

Support for PHP/Ruby scripts with additional scripting support including syntax checking, script execution, document parsing, comment stripping, and source highlighting.

Language Intelligence

Quickly interact with your project's structure using IntelliTips, QuickTips, Function Tips, the integrated Classviewer, resource editor, and integrated tag parsing.

And so much more...

IDM Computer Solutions, Inc presents:

UEStudio

Essential for Developers, Revolutionary for Power Users...

The Integrated Development Environment (IDE) Built on the World's Best Text Editor...

Code editing is a significant element of a programmer's IDE. It serves as the core foundation of all development functionality. UEStudio is built on the chassis of the world renowned text editor—UltraEdit. As such, UEStudio's backbone is highly seasoned, stable, and flexible. What's more, it has been proven as the defacto standard text and programmer's editor.

Because UltraEdit is so powerful, many programmers already use it as an IDE. Through daily use they have provided feature requests to extend functionality. Together, we have taken those requests, our own ideas, and the concept of a supercharged UltraEdit and produced UEStudio—a powerful development platform designed specifically for advanced programmers and developers.

UEStudio includes all the features of UltraEdit plus native support for over 30 popular compilers, an integrated debugger, integrated version control, built-in class browsing, language intelligence (like Intellisense), project converter, specific PHP and Ruby support, batch build and compile, and much more...

Build Applications with UEStudio

UEStudio is versatile and flexible because it is designed to be language neutral. As such, UEStudio can be used for a vast multiplicity of programming languages. UEStudio is natively equipped to support many popular compilers and assemblers including: Microsoft Visual C++, Java, GNU C/C++, and over 30 others! The powerful and customizable framework provides advanced IDE operations for your development environment. Similar applications, that offer the same type of functionality as UEStudio, cost hundreds of dollars more. What's more, they lack the seasoned backbone of UltraEdit for their edit control engine. Try UEStudio today!
