

Three Applications... For the Price of One!

1. **Military grade secure file deletion utility:** Permanently removes files, folders, and downloads forever! Files are deleted to where they are unrecoverable. Deletion methods meet or exceed U.S. Department of Defense secure electronic file deletion standards.

2. **Advanced Internet cleanup:** Erase autocomplete data, browser cache, history, temp files, malicious cookies and more for popular browsers and email clients.

3. **Disk sanitizer:** Advanced cleaning operations include unused disk space, swap file, specified INI and Registry entries, clipboard data and more.

Schedule UltraSentry to watch over your computer, sensitive files, and protect your privacy while you are away. Set the native profiles (Total System Scrub, Log-off Clean up, Browser Cleanup & Privacy Guard) to completely erase not only your browser history, but the registry entries, swap file, and free disk space that can point back to your recently used documents, search history, and deleted email.....all this from a company that has spent **over a decade** building a reputation for quality software, superior support, and value pricing.

IDM Computer Solutions, Inc presents:

UltraSentry

Rule # 1: Protect Your Privacy...

Secure File/Folder Deletion

When a file is deleted or sent to the recycle bin, only the file's reference (address) is deleted from a special directory called the File Allocation Table. This means that while the address may be gone, the information is still there.

UltraSentry works by overwriting the file/data with a series of repeated digital codes until the data is completely unrecoverable. In other words, when you use UltraSentry to delete information, you can be sure it's gone... and stays gone!

UltraSentry is a highly advanced military-grade disk and selected registry cleaner with configurable PC cleaning profiles that can run on demand, as scheduled or upon event to ensure your complete computing privacy and security.

UltraSentry and Corporate Standards

New **privacy acts have set new standards for corporations.** New regulations require companies to have a customer privacy policy in place. By law, your policy must include secure document retirement in order to be compliant with recent acts such as:

- HIPAA
- Gramm-Leach-Bliley Act (GLB Act)
- Sarbanes-Oxley Act
- The Patriot Act
- Identity Theft and Assumption Deterrence Act

Military-Grade Deletion

UltraSentry uses the same disk sanitizing methods developed by the U.S. Department of Defense!

Secure document retirement ensures that deleted (electronic) files are rendered unrecoverable. Most companies already have a policy to destroy paper documents; however, few companies have such a policy for electronic files. By incorporating UltraSentry's military-grade folder and file deletion utility into their electronic file retirement strategy, companies can securely overwrite and erase ALL sensitive information, providing not only compliance but corporate peace of mind.

Purchase a special technician's license to decommission and scrub multiple pre-used computers. If information security and privacy solutions are a concern for you or your company, UltraSentry can help with your Federal Electronic Document Retirement compliance.
