

SAFEDNS

Safe Internet for Business

Centralized security and management
for all your networks and users

Have you ever thought how much time your employees waste on irrelevant internet surfing and how many threats there are on the web?

For business users SafeDNS cloud-based web filtering solution is an excellent way to manage personnel's internet access, provide safe surfing, comply with corporate internet policies and protect networks from botnets, phishing and malware websites.

Fully customized to your individual needs SafeDNS corporate filter is just perfect for you and your staff. Our filtering service makes the internet safer for users with any web-connected devices on corporate networks at any time.

Service Features

Deployment Across Multiple Locations and Networks in Minutes

Whether you're seeking a solution for a dozen web-connected devices or several thousand of them, SafeDNS filtering service can be deployed fast across all locations and networks. Managing the service is easy through a centralized web-based dashboard. No on-site maintenance or upgrades required. It's really that simple.

No New Hardware. No Software

Eliminate network latency, bottlenecks and points of failure associated with traditional appliances or on-premise solutions. Reduce deployment time without ever leaving your office.

Safer Internet Experience

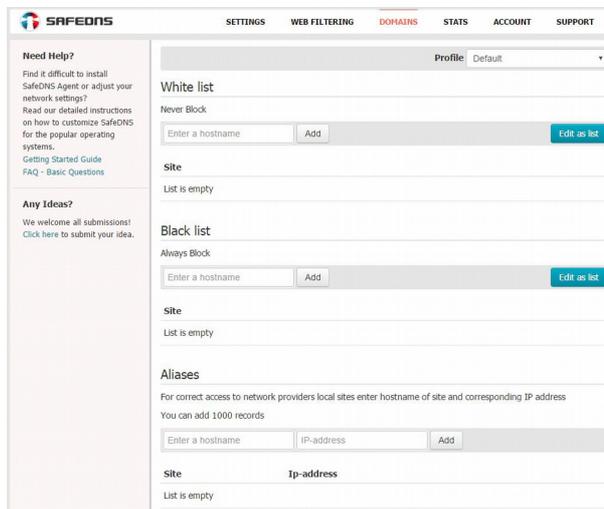

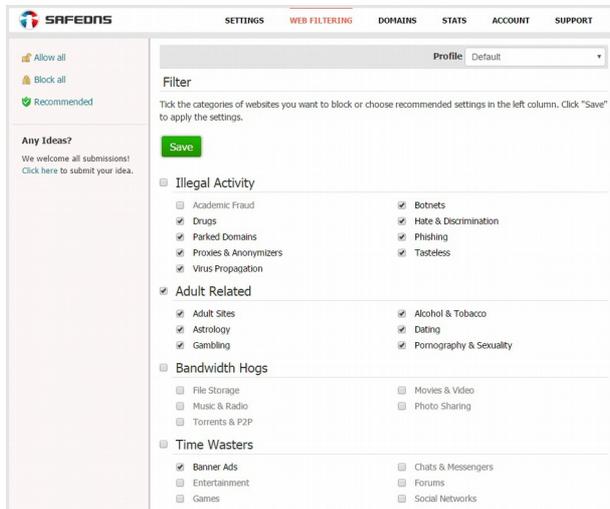

To create and enforce the ideal policy for your corporate network, choose from 55+ web filtering categories, covering millions of domains.

According to Forbes.com, *"the Internet is the greatest productivity drain of all workplace distractions. 64% of employees visit non-work related websites each day"*.

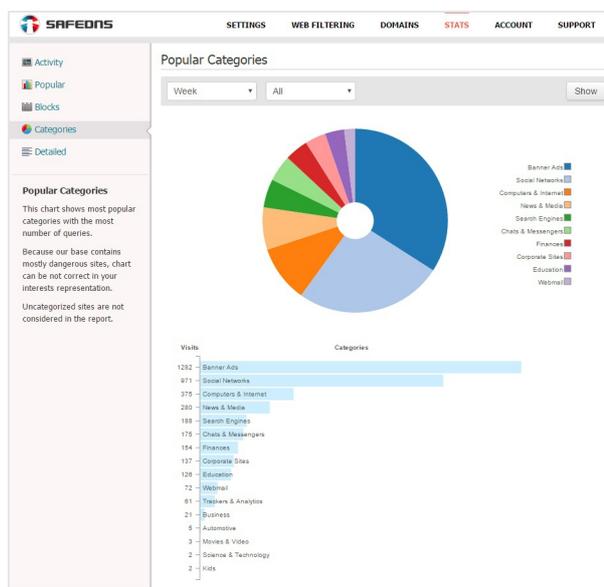

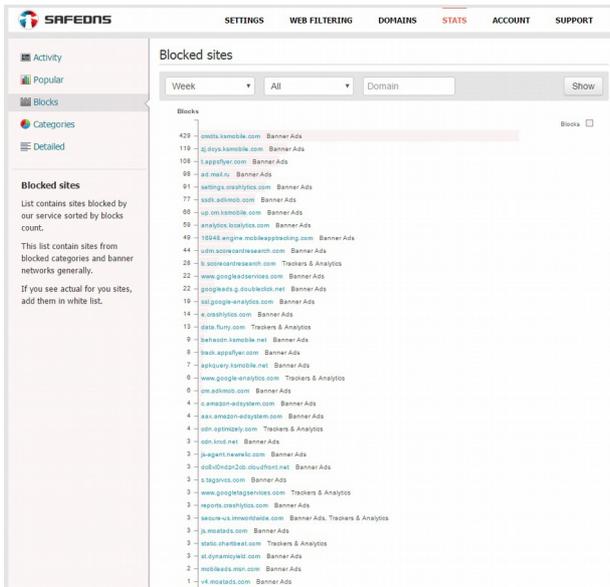

Moreover, we allow you to customize filtering to meet specific needs with white- and blacklists. Create exceptions to allow or block specific domains.

Dashboard & Reporting

Centralize policy configuration for all networks, locations and devices in a single web-based dashboard. We provide powerful reporting and statistics export. It makes monitoring your network users' activity online easy at any given moment. Our reports also show if there are any requests for sites which are inappropriate or not allowed.

“The SafeDNS system has performed extremely well in blocking websites. The "White and Black" list is a very useful tool. The service is easy to use and very user friendly”. Maryanne Sehlmeier, Walkers

Increase Brand Loyalty

Brand your block page with your logo and custom message for your users: employees, guests or customers.

Dynamic DNS Services Support

You can work with our filtering system regardless which IP addresses are given by your provider. SafeDNS supports both static and dynamic IP addresses. Moreover, it supports attaching of addresses through third-party dynamic DNS services and /nic/update API, which is very useful in multi-node network.

Variety of Service Plans

SafeDNS offers different service plans for companies of different sizes. The price of the service plan depends on the number of devices you are going to protect. Learn more about pricing on our Safe@Office plan.

Why SafeDNS

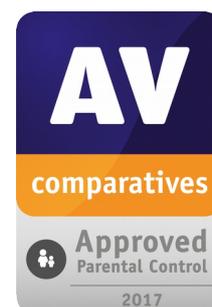

SafeDNS is one of the top developers of cloud based-web filtering solutions. Every day we process over 1B queries from users of our service. Our filtering servers are located throughout data centers in Europe, Asia, North and Central America. That's why there is no latency in our DNS filtering and internet surfing.

Since 2010 our service has been deployed in >40 countries by more than 100 ISPs, 300 partners, over 4000 schools and libraries and tens of thousands of home users. We protect networks in offices, malls, national parks, buses, hospitals, and many other places.

Our daily updated database of categorized internet resources contains over 90M websites and covers billions of web pages.

In July, 2016 to further improve our users' online protection SafeDNS launched an innovative system for detecting botnets and malicious internet resources (malware) which is based on continuous machine learning and user behavior analysis.

The efficiency of the SafeDNS web filtering service has been proved 3 times – starting from 2015 – by AV Comparatives, a world leading test lab. Our web filtering system is named **Approved Parental Control Product**.

According to the latest test results SafeDNS blocks 99.8% of requests to adult content, over 85% of other harmful content and has no false positives.

SafeDNS is named **Editor's Choice for Content Management & Filtering Solutions** in 2016 Cyber Defense Magazine Infosec Awards.

This recognition by the industry's leading electronic information security magazine emphasizes the fact that all SafeDNS users enjoy advanced technology for protection from web threats and making the internet cleaner and safer. The award further validates our company as an innovator in the sphere of online security and web content filtering.

SafeDNS is **Internet Watch Foundation (IWF) Member**. IWF is a leading organization for reporting and removing online child sexual abuse images and videos. Together we're making the internet a safer place. Read more or report a website here: www.iwf.org.uk. Do the right thing.

Being IWF Member, SafeDNS includes in its web filtering systems and blocks URLs of indecent images of children and abuse domains from Child Abuse Images and content list (CAIC) compiled by IWF.

SafeDNS is also **Friendly WiFi Approved Provider** which means our content filtering solutions are recommended for public WiFi owners and providers seeking to ensure safe web connection for their users.

Benefits You Get

- **Easy and quick deployment** across multiple locations and networks requiring no software or additional equipment.
- **Fine tuned filtering** for any number of individual users or groups of users.
- **Custom settings managed by an administrator** from anywhere on the internet.
- **Faster and safer web surfing**, free of ads, saves your business a lot of time and money.
- **Protection for individual devices or your entire network.**
- **Additional layer of online security** complementing your AV and firewall. Our filter prevents possible attacks from the internet as well as from infected end user devices.

- **Cost effective way** to manage and control internet use limiting online activity to relevant resources only.
- **Whitelist-only mode** restricts web access to specific domains only.
- **Customizable block page** – it will look exactly as you find it necessary.
