

Certified, secure PHP distribution

- Create and run great apps faster
- Isolate bugs with Z-Ray and code tracing
- Automate deployment
- Monitor applications
- Optimize performance
- Gain deep insight into how code runs
- Scale on-demand
- Integrate with existing tools

ZEND SERVER

The fastest way to enterprise PHP

From development, to testing, to optimizing scale, Zend Server brings serious PHP to your enterprise. Business-critical PHP applications can be developed, deployed, and on premise or in the cloud, using the world's best PHP application platform.

With Zend Server, development and operation teams are equipped with the software infrastructure, tools, and best practices for productive collaboration and continuous delivery of their mobile and web apps with exceptional performance, reliability, and security.

- **Faster to PHP 7:** Supporting the explosive performance of PHP 7 with innovative tools to rapidly isolate production issues, Zend Server is a proven platform to help organizations deploy faster, reduce downtime, and operate at internet scale.
- **Faster to fix issues:** Three powerful tools help isolate bugs faster: code tracing, Z-Ray, and URL Insights. With code tracing, you get a complete record of app state and behavior without spending time reproducing them. With Z-Ray and URL Insights, live data shows how code and URLs are performing, letting you instantly debug performance and behavior.
- **Faster to scale:** Purpose-built to scale, Zend Server offers session clustering and cluster management, job queue management, caching, and application performance monitoring to help you match any user demands. And with included deployment tools, you can streamline, automate, and accelerate continuous delivery cycles.

Ultimate debugging with Z-Ray

Included as part of Zend Server is Z-Ray, the ultimate PHP productivity solution. Z-Ray seamlessly plugs into your existing workflow, providing deep insight into the code as you develop — even in production. With Z-Ray, you can immediately understand the impact of any changes to the code, enabling you to improve quality and solve issues long before your code reaches production.

Rogue Wave provides software development tools for mission-critical applications. Our trusted solutions address the growing complexity of building great software and accelerates the value gained from code across the enterprise. The Rogue Wave portfolio of complementary, cross-platform tools helps developers quickly build applications for strategic software initiatives. With Rogue Wave, customers improve software quality and ensure code integrity, while shortening development cycle times.

Infinitely scalable, always available in the cloud

Zend Server is the leading platform for scalable mobile and web applications. The simplicity and reliability of cloud solutions is that they are available on a variety of platforms at prices that anyone can afford. Using Zend Server in the cloud lets you choose the tools, scale, and management options that best suit your team and ensures your applications are portable — the same app that runs on one cloud can easily move to another zone or provider at any time. Zend Server is available through several cloud vendors including Amazon Web Services, Microsoft Azure, Google Cloud Platform, and IBM.

Supported in multiple environments

Zend Server is available for both production and development environments. The right version depends on your team, the features you need, and the level of support that fits your priorities.

Long-term support for PHP and Zend Server allows organizations to efficiently define and plan their business critical application development, production deployments, and migration strategies. Zend Server includes complete long-term support and ongoing maintenance for the certified PHP runtime environment. Support for each major PHP runtime version is provided for five years from initial Zend Server release on that version, extending the support period by two years over the support provided by the open source PHP community.

Bringing full web stack support to your team

The Zend Server Plus editions bring full web stack support to your team, providing expert-level guidance, training, and technical solutions to keep mission-critical systems running. Supporting everything under Zend Server and the application, including web server, database, and OS, our enterprise architects are on standby to fix performance issues, production outages, and security holes with guaranteed SLAs.
